

# Dashboard

You can create or customize your dashboard as like as you want.

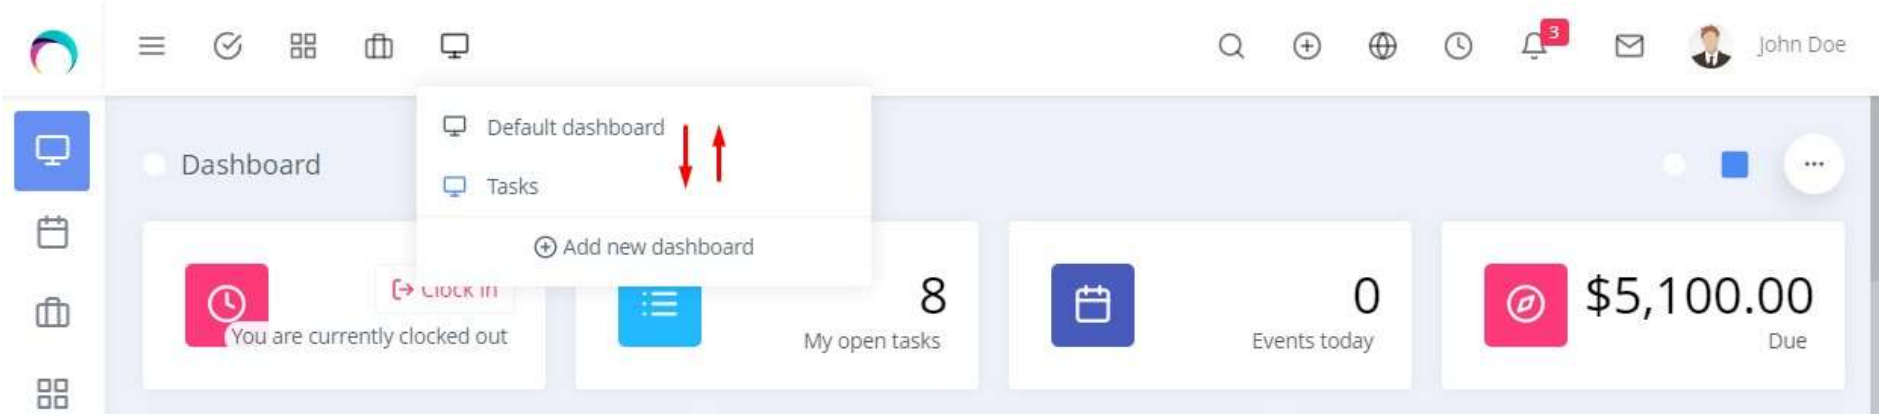

Create a new custom dashboard using the **Add new dashboard** button from the dropdown in your default dashboard.

Customize dashboard

1. There has several **widgets** for your dashboard. You can drag the widgets to dashboard editing rows from here.
2. You can add as many rows as you want with desired columns by clicking this button.
3. If you want to see the **preview** of the widget, you can simply click on this button.
4. To remove the entire row, use this button. The widgets on the deleted row will be back to the widgets container. So, you can use those widgets again if you want.
5. If you want to save the dashboard without leaving the editing panel, you can use this button.
6. This button will save the dashboard and move you to your newly created/edited dashboard.

Dashboards list

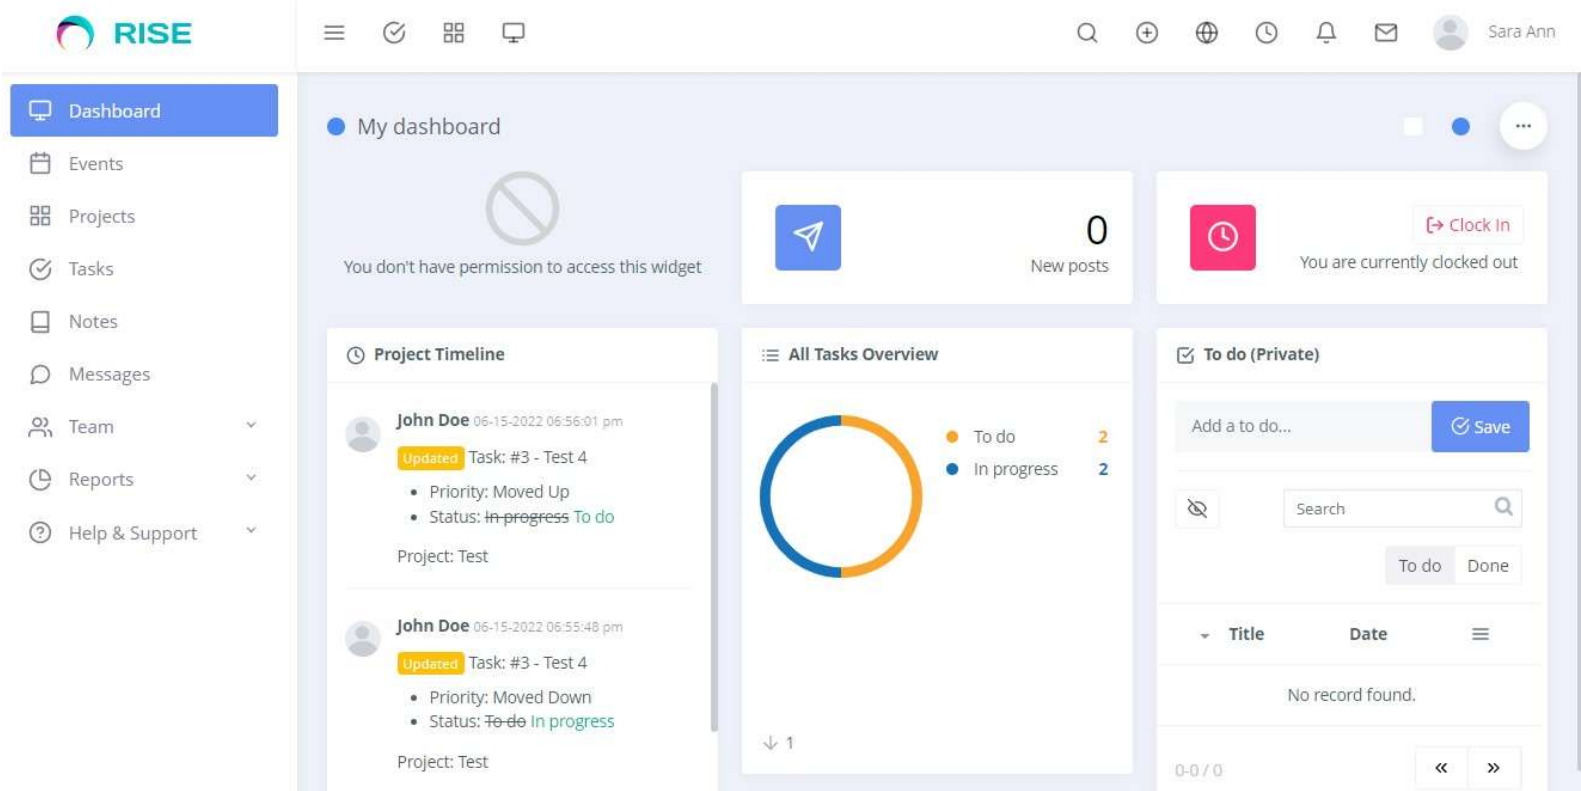

1. Quick navigation for your dashboards containing selected colors.
2. This is your dashboards list. Please note that, the dashboards here are sortable. You can easily move up/down them except Default dashboard.

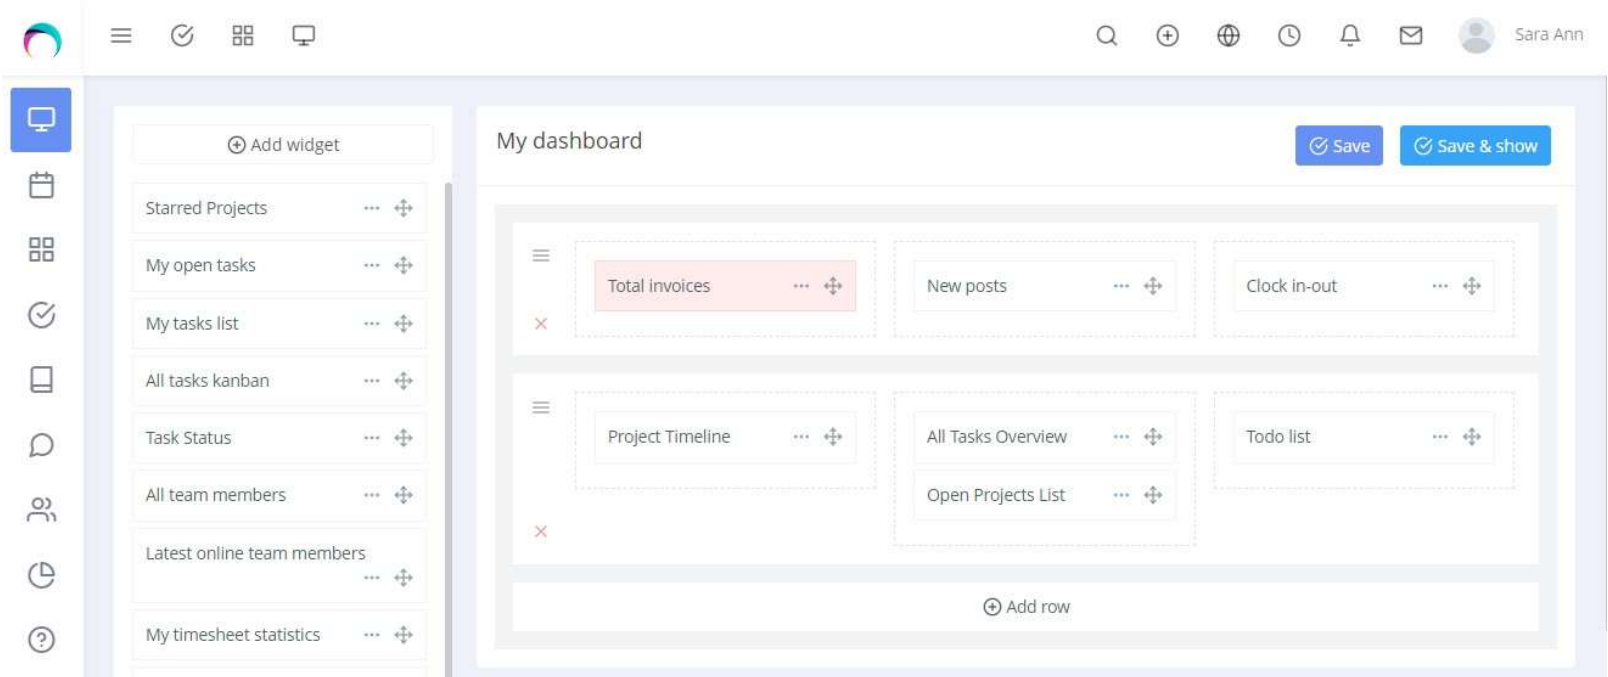

Extras

If you'll lost control or access to your selected widget(s), then those will show like the images below.

- In view mode.

- In edit mode.

Top navigation bar

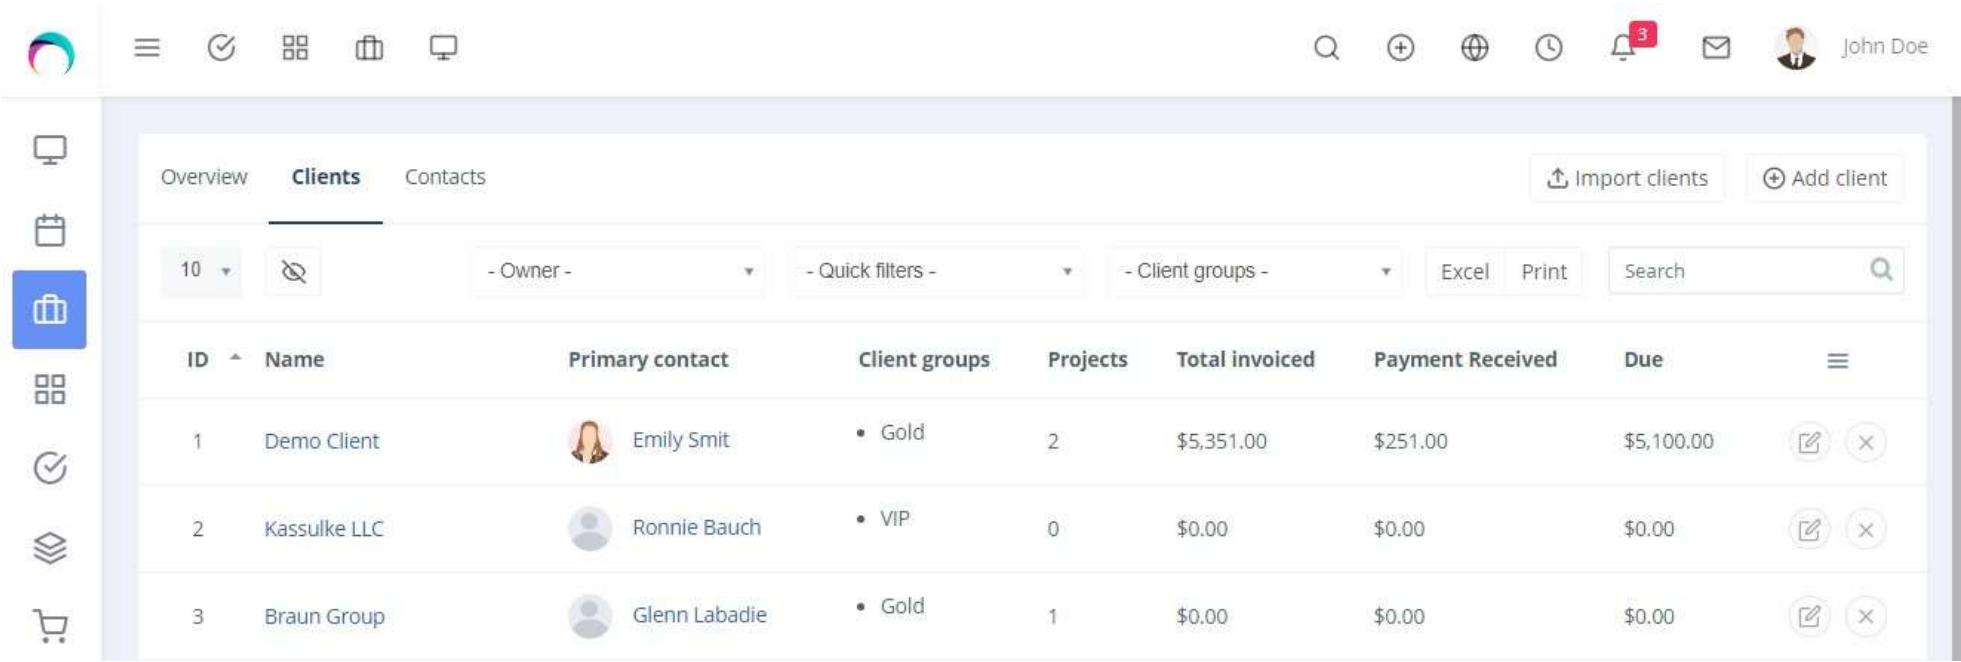

1. You can toggle your **side navigation bar** with this icon.
2. This will move you to your **To do** list.
3. You can see your **Starred projects** dropdown here.
4. You can see your **Starred clients** dropdown here.
5. Here is your **Dashboards** dropdown.
6. This is the **Quick add** button. You can easily add anything with this like tasks, multiple tasks, events, tickets and more.
7. If you want to set a language only for your own, then this will take care. You can also set this from your **Preferences**.
8. This is your **Notifications** list.

- 9. This is your **New messages** list.
- 10. This is your **Profile info** dropdown. You can go to your profile, sign out, change password or select custom theme from there.

Clients

You can create and manage your customers in clients section.

List of Clients

- 1. Create new client using the **Add client** button.
- 2. Search the existing clients which already added in this application.
- 3. To see the details information of the client click on the Company name link.
- 4. If you need to edit the client's information you can do it using the edit button.
- 5. To delete the client use the delete button. Once you click on the button, the system will delete the client and you will have a chance to undo the action within 10 seconds. If you don't undo the action, the system will delete the client permanently and you will not be able to revert the client anyway!
- 6. If you want to save the clients list in Excel file, you can simply click on this button and the visible clients in the table will be exported.
- 7. If you need to print the clients list, click on the print button.
- 8. You can define the rows per page of the table from here.
- 9. You can filter the clients with your desired client groups.

Add new client

- 1. The company name is an organization you or your organization works for. Even if your client is a person you have to add the information as a company. After creating any client you can add contacts of that client.
- 2. You can define different currency for different clients. It's useful when you are working with a foreign client which currency symbol is different from your default currency symbol. By default the invoices of the client will be generated using the default currency symbol if you don't define any currency symbol with that specific client.

1. The contacts tab contains the list of contacts of the client. You can add one or more contact by clicking on the **Add contact** button.
2. To send an invitation to any user for the client, use the **Send invitation** button.
3. Client info tab contains all the informations of the client. You can check/edit the informations from here.
4. Projects tab contains all projects of the client.
5. Invoices tab contains all invoices of the client.
6. Payments tab contains all payments of the client.
7. Estimates tab contains all estimates of the client.
8. Estimate Requests tab contains all estimate requests of the client. Which are requested from client or added by team members.
9. Tickets tab contains all tickets of the client.
10. Notes tab contains your personal notes with the client. Please note that, this won't be visible to client.
11. Files tab contains your personal files with the client. This also won't be visible to client.
12. Events tab contains all of your events with the client.
13. To delete any contact from the client, use the delete button. Once you delete any contact you can undo the action within 10 seconds. If you don't undo the action the contact will be deleted from the client permanently and the contact will not be able to login in the client portal.

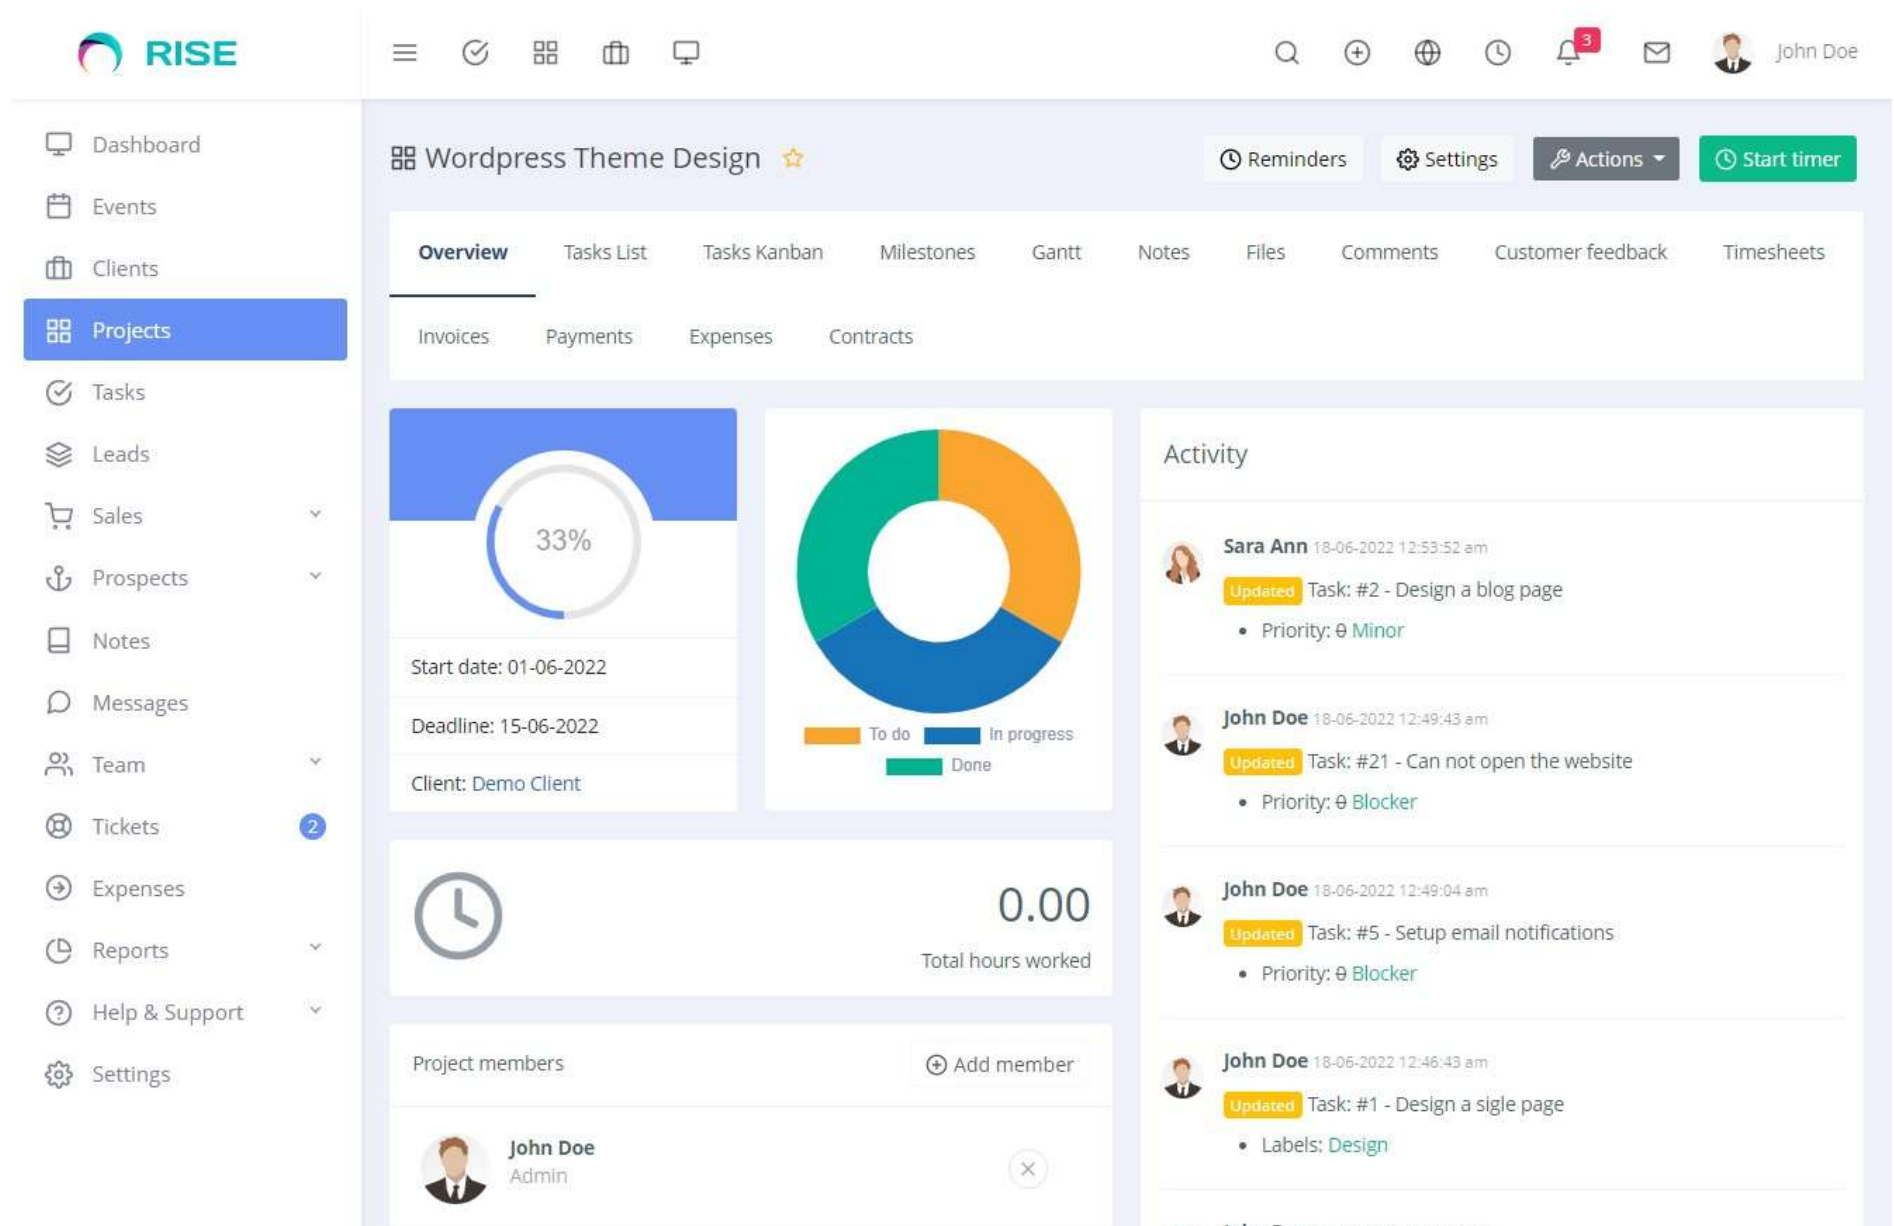

## Projects

You can create and manage your projects here.

- ## Project Details

1. To track the project time you can use the **Start time** button. Once you click on the **Start time** button the timer will be turned on. When you want to stop tracking the time you have to click on the **Stop timer** button.
2. You can edit, clone or change the status of project from the options dropdown.
3. The project progression chart represents the total progression of the project.
4. You can see the total tasks status of the project from the chart.
5. Activity timeline represents the project history.
6. To add new member in this project, click on the **Add member** button and select the user.

«

1

»

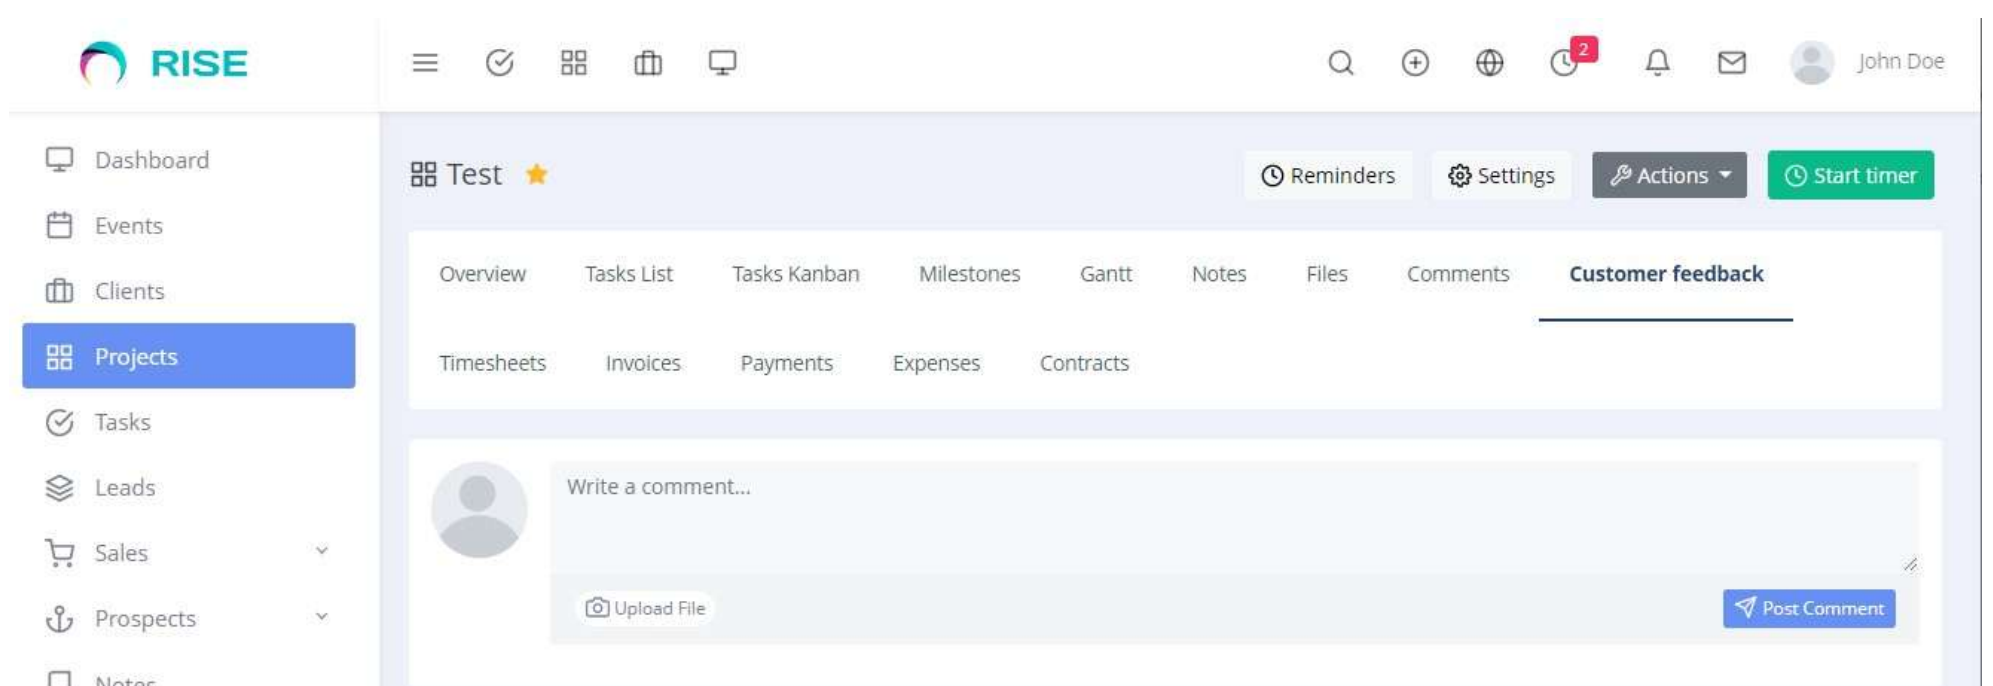

1. Create new task using the Add task button.
2. You can use this check-box to make a task as done by instantly.
3. Suppose you want to change milestones, assigned to, status or other informations for multiple tasks. Then you can simply use this **Batch update** button. After clicking on this, a selection panel will be appear just beside the tasks. After choosing your desired tasks, click on the Batch update button. Then a modal window will be open. From there, you could select and change which fields you want to change.
4. If you want to add multiple tasks without leaving the modal, use **Add multiple tasks** button.
5. To change the task status easily, you can use this.
6. To see the details information of the task, click on the task title link.

Milestones

1. Create new milestone using the **Add milestone** button.
2. When all tasks of the milestone will be completed, the milestone's color will be Green.
3. If the milestone's deadline is expires by today and there has non-completed tasks with this, then the color will be Red.
4. The progress bar indicates the total progression of the milestone. To generate this progress bar, we calculate the total completed and non-completed tasks with the associated milestones. The tasks points are important to calculate the progression.  
Here applied the same logic which to generate project's progress bar.

Customer feedback

You can easily receive customer feedback from your client or you can add a customer feedback to your client.

## Estimates

You can create and manage estimates from the **Estimate List** under **Estimates** menu. Only admin and allowed team members can access the Estimates page. And the clients can see only their own estimates. Admin can define the role of a member to access the estimates.

On the estimate's details page, you can add as many **items** as you need like invoices.

When you sent an estimate to your client, the client or you can accept/reject it. After accepting the estimate, you can easily create invoice or project from the **Actions** dropdown.

## Estimate requests

In this application, you or your clients can easily create or manage Estimate requests. This is located under **Estimates** menu.

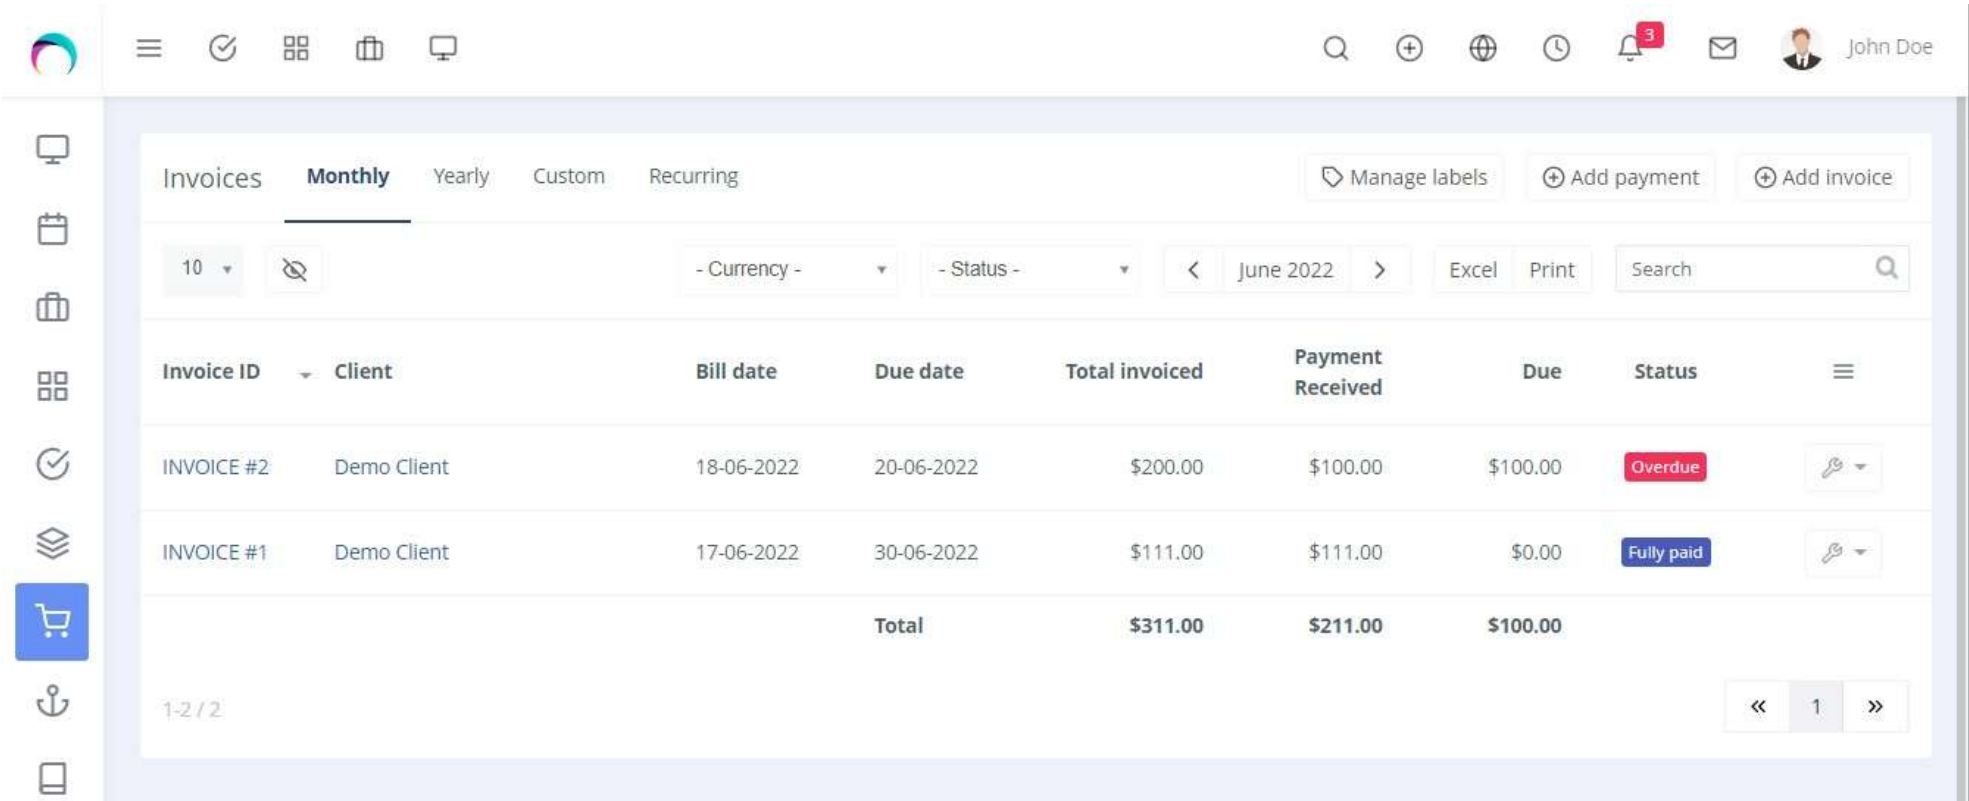

To create an estimate request, first you've to create a **Form** from **Estiamte Forms** under Estimates menu. You can create as many forms as you want. Which forms you'll mark as **public**, will be available to any user even whose are logged out from the app.

Then you can request an estimate by selecting your desired form and filling out. Client's also could do the same.

After getting/submitting estimate request, you can easily add **Estimates** from there or change the status of the estimate request.

## Invoices & Payments

You can create and manage your invoices from the **Invoices** menu.

### List of Invoices

1. Create new invoice using the **Add invoice** button.
2. To see the details information of the invoice click on the invoice id link.
3. The invoice status represents the different states of the invoice. By default any invoice will be create with **Draft** status. Once you sent the invoice to the client then the invoice status will be changed to **Sent**. Once you receive any payment the invoice status will be changed to **Fully paid** or **Partially Paid**. When you cancelled the invoice then the invoice status will be **Cancelled**.
4. There could be many invoices with different clients. And the currency of the clients could also be different. With this filter, you can easily see your selected currency's invoices.  
Please note that, this filter won't be visible if there is only a single currency used for all clients.

**Actions** dropdown menu options:

- Email invoice to client
- Download PDF
- View PDF
- Invoice Preview
- Print invoice
- Edit invoice
- Mark as cancelled
- Clone Invoice

**Add payment** button

**Add item** button

1. To add any item/product in the invoice, click on **Add item** button.
2. If you want to edit the inserted item, you can click on the edit button of invoice item row.
3. By clicking on delete button in invoice item row, you can delete the item from the invoice.
4. To send a **pdf** copy of the invoice to the client, click on the **Email invoice to client** menu.
5. You can download a **pdf** version of the invoice using the **Download PDF** menu.
6. If you want to see the invoice pdf instead of download, you can simply use the **Invoice Preview** menu.
7. You can print the invoice instantly using the **Print invoice** menu.
8. To edit any information in the invoice click on the **Edit invoice** menu under the **Actions** dropdown.
9. To make the invoice as cancelled, you can use **Mark as cancelled** menu. After clicking on the menu, a confirmation modal dialog will be appear. If you confirm from there, this action can't be undone and the invoice will mark as cancelled.
10. By clicking on the **Add payment** button you will get a modal to add payment in the invoice.
11. You can add **Discount** in the invoice from here. You can add this after/before tax with a fixed amount/percentage.

## Subscriptions

In RISE, there are two kinds of subscriptions. Internal subscription and Stripe subscription.

- **Internal subscription:** It'll be managed by the app by cron job. The invoices will be created on the billing dates. Then the admin or client can pay the invoices manually. No auto payment is available here.

- **Stripe subscription:** It'll be managed by Stripe. The payments will be captured from clients cards automatically on the billing dates and the invoices will be created as well.

Subscriptions statues:

- **Draft:** Initial state of a subscription. No invoices/payments will be added at this state.
- **Pending:** For stripe subscription, once the subscription request will be sent to the client, the subscription will stay on the pending status until the client Until the client subscribes.
- **Active:** Billing will be activated on this state. For internal subscription, admin can activate the subscription any time. For stripe subscription, the subscription will be activated once the client set the payment method.
- **Cancelled:** Client or admin can cancel any subscription to stop the billing.

**First billing date:** This could be current date or any future date. For future date, the date must be before next billing cycle date. For example, if the subscription billing cycle is monthly, then the maximum future date could be 1 month from the current date. To start the subscription on the current date when client setup the payment method, keep the first billing date as blank.

Expenses

In this application the expenses are located in under the **Finance** menu. Click on the **Expenses** menu to access the expenses page. Only admin and allowed team members can access the Expenses page. Admin can define the role of a member to access the expenses.

The expenses view represents a list of expenses. Admin can add new expense categories from the Settings section.

Support Tickets

In this application you can create any support ticket on behalf of your client or client can create any support ticket for himself.

List of Tickets

1. Create new ticket using the **Add ticket** button.
2. To see the details information of the ticket click on the **ticket title** link.
3. You can filter the tickets list with the created date from here.
4. You can filter the tickets list by the given labels of tickets from here.
5. If you want to see a specific team member's tickets, then you can simply use this filter.

6. If there is no member assigned with the ticket, you can assign to yourself in this ticket instantly by clicking this option from dropdown menu. Please note that, this will only be visible if there is no member assigned with the ticket and you can assign to the permitted members by editing the ticket anytime.

## Team Members

Using this application you can manage your team members easily.

There are two views for team members.

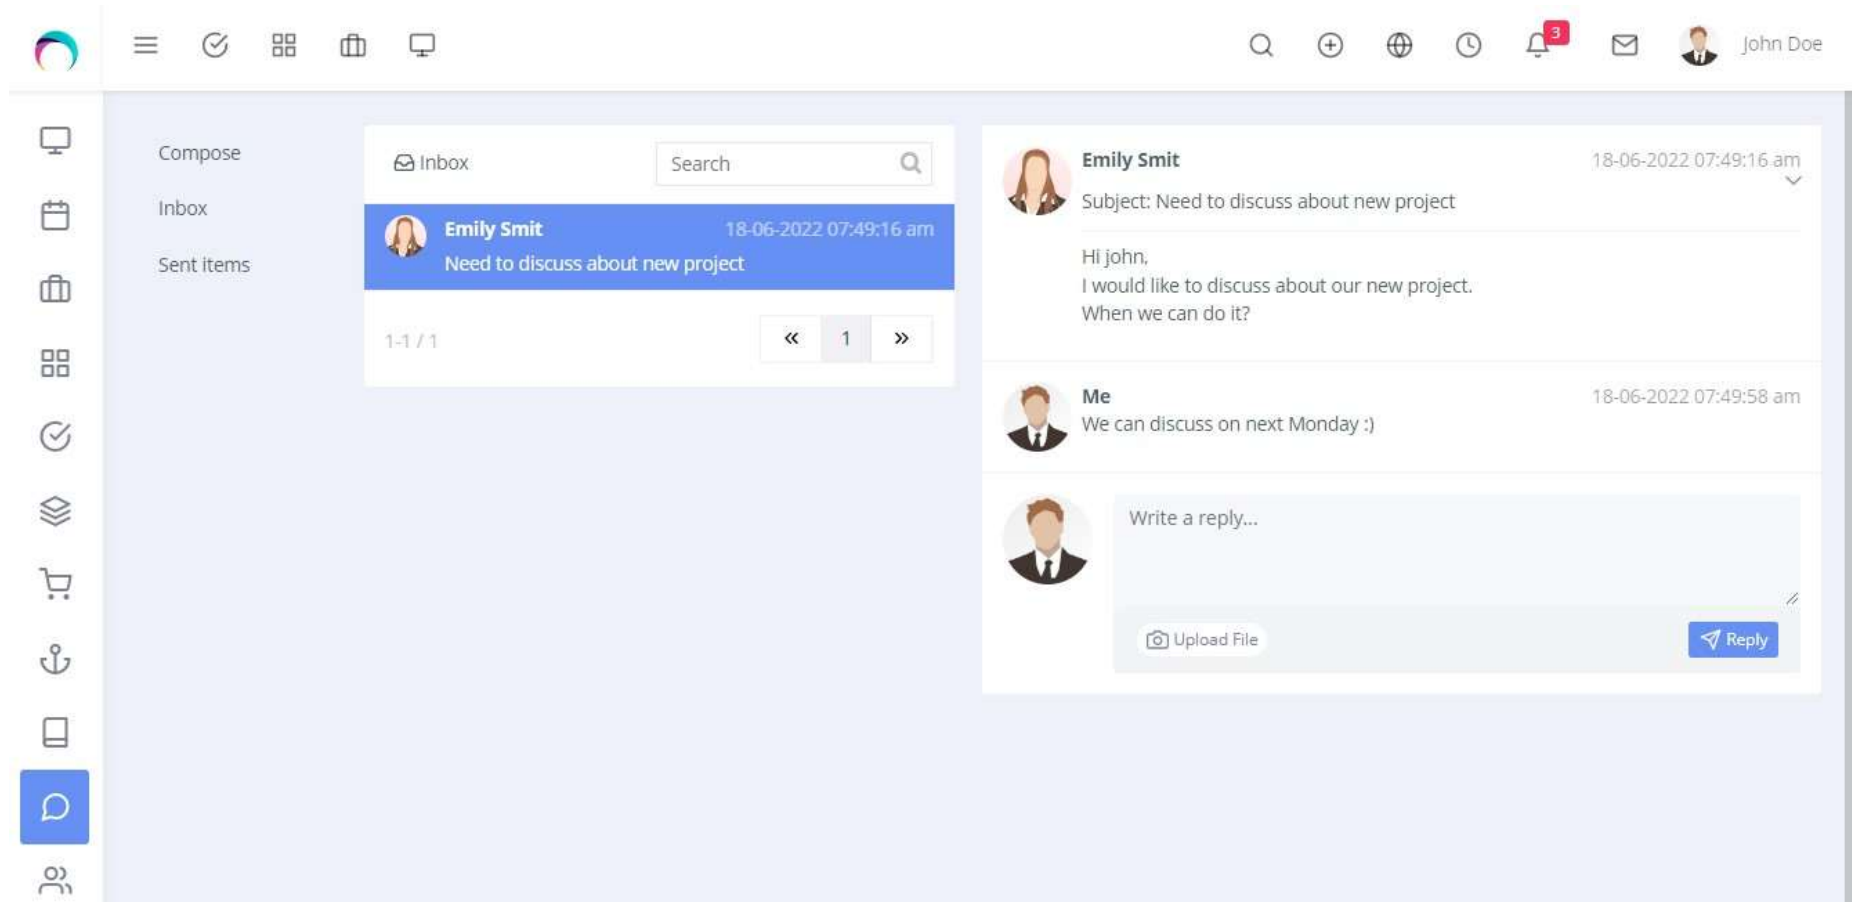

1. Whenever you want to add a new team member in this application, you can send invitation to the users email. The user will get an email with the signup instructions.
2. Instead of sending invitation to the team members, you can add any team member manually, using the **Add member** button.
3. To view the details of any team member, click on the **view details** link.

Team member's Details

In team member's details view, you can see the details information about any member at a glance.

1. The **Timeline** tab represents all the posts of the member.
2. You can view or update the basic information of the member from the **General Info** tab.
3. Manage social links from the **Social Links** tab.
4. You can manage the login or access role from the the **Accounts settings** tab.
5. The **Job info** tab represents the job title, salary and the other job related information.
6. To see the details list of the member's attendance, check the **Time cards** tab.
7. From the **Leave** tab, you can see the details leave history for the team member.

## Messaging

All team members can send message to any team member. There are no restrictions to send messages for member to member.

Admin can control the messaging rule between team members and clients. From the Client settings, admin can set who can communicate with the clients. Only the selected members will be allowed to send/receive message to/from the clients.

Whenever you receive any new message, a notification icon will be appeared in the top right section in the application.

## Events & Notes

### Events

The events page represents a calendar with all events. You can add new event in the calendar. Click on the calendar date to add any event on that specific date. You can define different colors for different events to make the view easier to see.

By clicking on any event, you can see the details information about that event.

### Notes

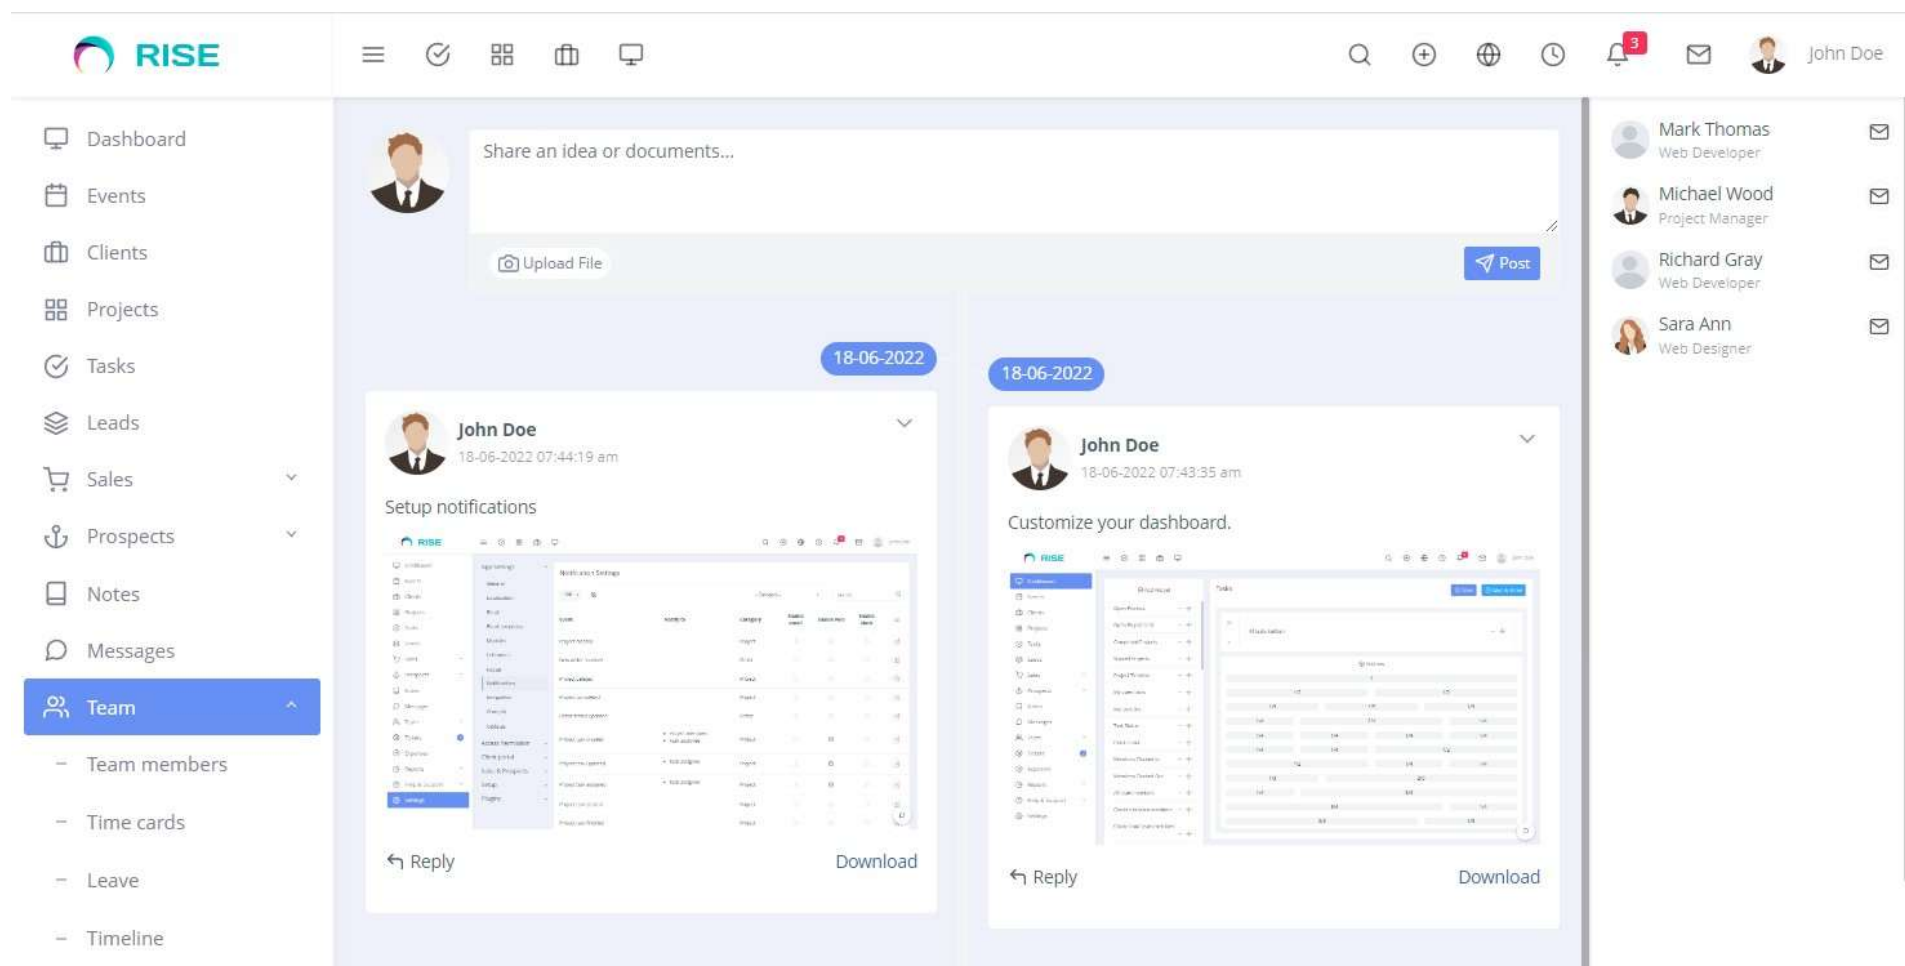

There are two kinds of note in this application. In dashboard, you can save any quick note in **Sticky Note**. In this application all notes are private (Only you can see your notes).

There are other notes in the Notes page. You can add any private note here. If you add any note in any projects that notes also will be appeared in the notes list.

## Timeline

Timeline is a collaboration/conversation area of the team members. All team members can see this view. It's a best place to share any idea or files among the team members.

To share any file you can click on **Upload File** button or drag and drop files on the box. By default all file types are not supported to upload in the application. Admin can set the settings of accepted file formats in **General Settings** section.

## Time Cards

The time cards section represents the attendance or total time log of each team members. Any team member can start clock from the dashboard by clicking on **Clock In** button. Once he/she clicks on the **Clock In** button the timer count starts. After clicking on the **Clock Out** button the timer stop counting the time for the team members.

Admin or allowed members can add time manually for any team member.

If admin wants to set any IP restriction for this module then he/she can set the allowed IP addresses in the **IP Restriction Settings** Section Under the **Settings** menu. Admin users are not applicable for this restriction. The admins are allowed to access the time card Clock In/Out from any IP address. The system will check the IP address of the non-admin team members.

## Leave

This application allows the leave management facility for the team members. The team member can apply for leave and the admins or superiors can approve/reject the leave application. Admins and superiors can also assign leave for subordinates. Admin can create various leave types from the **Leave types** Setting.

1. Apply a new leave using the **Apply leave** button.
2. Admins or allowed members can assign leave for team members using the **Assign leave** button.
3. To see the details information of the leave, click on this icon. From there, allowed members can approve/reject the leave. Please note that, once it'll be approved/rejected this operation can't be undone or change.
4. All applications tab contains all of the leave applications.
5. Summary tab contains the yearly summery chart of approved leave applications.

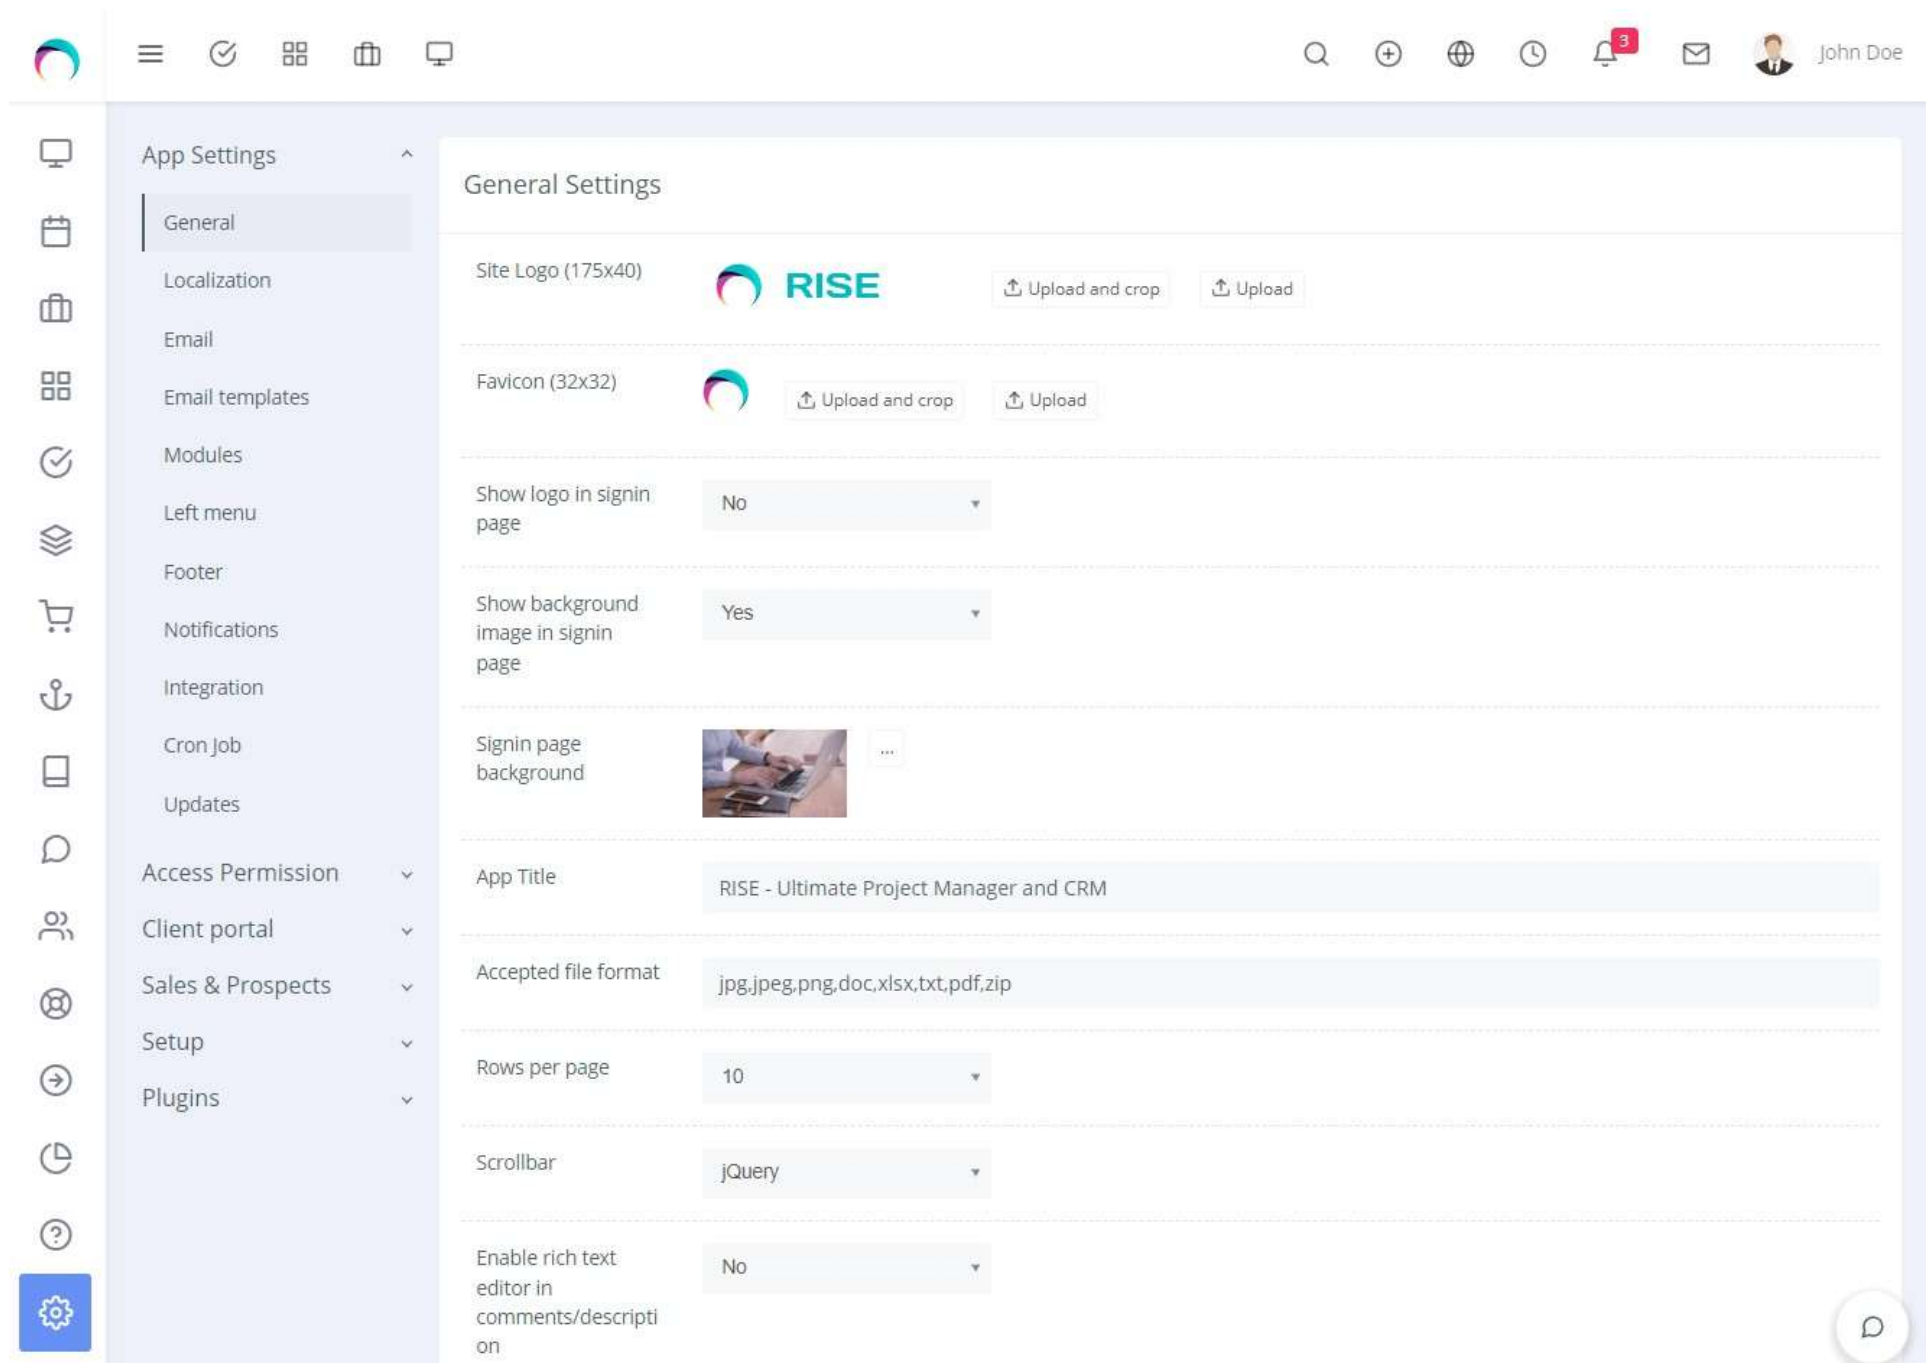

## Announcements

This application provides the announcement publishing feature. The admins and selected team members can create new announcement for team members and/or clients.

The published announcement will be appeared in dashboard of each user. Once the user clicks on the announcement then it will not be appear in dashboard again. But the users can see the announcement from the **Announcements** menu anytime.

## Settings

The application has various types of settings to make suitable according to your work. Here are some basic introductions about the settings.

#### General Settings

- **General:** In this section, you can change the application logo, title, localization settings, file type restriction and the item purchase code.
- **Email:** This setting is for out-going emails. All emails will be sent using the settings. You can use either the default mail sending method of your server or SMTP. To setup Microsoft Outlook SMTP, please follow [this](#).
- **Email templates:** The application has some default email templates which are using to send different emails. You can change the appearance of the email templates as you like.
- **Modules:** You can enable/disable your desired modules from here.
- **Cron Job:** This setting has a broad description. Please check [this](#).
- **Notifications:** This setting has a broad description. Please check [this](#).
- **Integration:** You can integrate some cool APIs from here. Please check integration tab from menu for explained description.
- **Updates:** Please check [this](#) for upgrading guide.

#### Access Permission

- **Roles:** It's a setting to set different access permission for different users. To add any role click on the **Add role** button. Once you create any role then you can set permission to the role by clicking on the role. You'll see different types of access permission and you can choose in your own way. After defining the roles you can set the role to any team member. Each team member can have one role at a time. By default all team members has the **Team Member** role. To change the role of any team member, go to the team member's details view and click on the **Account settings** tab and choose your desired role for the member.
- **Team:** You can create teams with your team members. So, you can assign role on several team(s), share events and much more.
- **IP Restriction:** If you would like to prevent accessing the Clock In/Clock Out of Time card from unauthorized IP, you can add authorized IP address here.

#### Client

- **Client permissions:** In this area you can control the client login/signup and the message sending rule between client and team members.
- **Client groups:** Here you can create client groups. So, you can easily choose your desired client groups with your clients.

#### Setup

- **Custom fields:** You can create custom fields for various items as your wishes. There has 8 types of field type. You can also give permissions to them that, if they will show on tables or not and visibility to users. Then they will appear on add/edit item screens and tables according to the permissions.
- **Tasks:** You can create task status from here. Then you can select the task status from the add/edit task screen.
- **Events:** You can enable Google Calendar API for per users from here.
- **Leave types:** You can create various leave types from here.
- **Tickets:** You can create various ticket types and modify ticket settings from here. For IMAP integration, please check [this](#).
- **Expense Categories:** There could be various expense types in your business; you can add the types here.
- **Invoice:** There has some invoice settings to make things ease. You can change your invoice logo, invoice style, invoice reminders and more.
- **Payment Methods:** To receive any payment through invoice the payment methods are required. Add your required payment methods in this section.
- **Company:** You can setup your company informations from here. Then it'll be available on Invoices and Estimates.
- **Taxes:** In this application the taxes are using in Invoices and Estimates. You can define different taxes name and percentage here.

#### Plugins

You can install & manage third-party plugins from here. If you want to develop a plugin, please check the [Plugin documentation](#).
